ANCHOR FANS
Stay cool. Stay refreshed.

Designed to inspire awe, Anchor’s wide array of ceiling fans refresh your mood with a cool breeze, the moment you step indoors. These ingeniously designed, energy-efficient fans not only assist you in cooling your household, but their stylish designs add a subtle gleam to your abode. The aerodynamic blades ensure maximum air delivery, superior air throw, optimum performance and durability.

From designer to high-speed fans, from decorative to standard fans; Anchor offers a complete range to meet varied individual needs. So, switch on an Anchor Fan and simply cool off.
Introduction

A wholly owned subsidiary of Panasonic Corporation, Japan, Anchor Electricals is one of the largest global electronic conglomerates. Being an iconic Indian superbrand to have fostered innovation, Anchor has constantly and consistently made the end user’s life simpler, safer and more comfortable.

What began as a small venture five decades ago, became a leading electrical component manufacturer in the country. Today, Anchor has a business presence in all key verticals of the electrical building constructions material industry, namely switches and accessories, wires and cables, lighting and luminaries, switchgear and protection devices and fans.

The Fans division of Anchor constantly endeavours to deliver stellar products to the end-user and is vital towards the growth of Anchor as a preferred brand.
Manufacturing

Anchor’s newly commissioned fan factory is spread across 108,68 million sq. cm. This facility constantly endeavours to manufacture path-breaking products to serve the ventilation needs of the diverse economic segments across the nation. Equipped with contemporary manufacturing machinery, this facility is a wholly integrated unit that manufactures the entire range of Anchor Ceiling Fans. The fans unit deploys imported winding machines and ultra-modern CNC machines that have facilitated Anchor Fans to deliver quality products that benefit the modern housing requirements.

The entire manufacturing process is proficiently supported with Panasonic’s technical prowess and continuous efforts are taken for improving the processes, upgrading the technology and designing of products, that are customised to meet the needs of Indian consumers.

The fully automated, state-of-the-art winding shop ensures the optimum quality and consistent product performance of the ceiling fan motors. Specially customised and automated CNC machines aid the production by ensuring zero defect in manufacturing of the fan’s major components. Computerised alignment of the blades deliver absolute consistency in the air delivery. The advanced aerodynamics ensure a superior air throw. Finally, the superior quality of paints and evolved coating process make the fans rust-resistant.

Further, the distribution system involves end-to-end tracking of the products and the skilled logistic professionals handle advanced inventory management effectively. The customer service division backs the manufacturing and its technicians offer round-the-clock after-sales support.

Quality and R&D

Committed to 360° innovation, the Quality team at Anchor focusses on total quality management. This has enabled Anchor’s Fans facility to obtain the prestigious ISO 9001: 2008 certification.

With one of the finest testing laboratories in the country, its experts ensure that every single product meets the stringent quality standards. This involves making sure that all processes, right from checking of the raw materials to dispatch of the finished products, function smoothly. From the metal parts used in fan manufacturing till the packaging of the final product, experienced quality professionals supervise every operation. The fully automated testing facility constantly challenges the conventional boundaries of manufacturing and explores new synergies in performance of both product as well as the manufacturing methods. This ensures a zero-defect dispatch of the finished product. The periodic internal audits and initiatives such as Kaizen, streamline the production process and minimise production waste, thus conserving energy and resources.

Further, it constantly attempts to be up-to-date on the technological advancements and endeavours to manufacture products and solutions that are environment-friendly. Anchor strives to improve the quality levels collectively, for its overall trade and independently as a company. It also aims to be the most trusted and innovative electrical solutions provider in the building construction industry by 2018, the centenary year of Panasonic’s foundation.
Electroplated
CEILING FAN
EP-01
When shine matters

Features:
- Wide Trendy Round Motor Design
- Durable and long-lasting Electro plated coating finish
- High quality pre-greased double ball bearing for high speed and noise less operation
- Durable and long lasting Electro plated coating finish
- No ageing and deterioration on the edges of blade
- Optimum performance at fluctuating voltage
- Balanced body for wobble-free performance
